

SENATE, No. 7

STATE OF NEW JERSEY

208th LEGISLATURE

INTRODUCED JANUARY 25, 1999

Section 38. [New Section]

[Subsections a. – d.]

e. Notwithstanding any provisions of the "Administrative Procedure Act," P.L.1968, c.410 (C.52:14B-1 et seq.) to the contrary, the board shall initiate a proceeding and shall adopt, after notice, provision of the opportunity for comment, and public hearing:

(1) net metering standards for electric power suppliers and basic generation service providers. The standards shall require electric power suppliers and basic generation service providers to offer net metering at non-discriminatory rates to residential and small commercial customers that generate electricity, on the customer's side of the meter, using wind or solar photovoltaic systems for the net amount of electricity supplied by the electric power supplier or basic generation service provider over an annualized period. Where the amount of electricity generated by the customer-generator plus any kilowatt hour credits held over from the previous billing periods exceed the electricity supplied by the electric power supplier or basic generation service provider, the electric power supplier or basic generation service provider, as the case may be, shall credit the customer for the excess kilowatt hours until the end of the annualized period at which point the customer-generator will be compensated for any remaining credits at the electric power supplier's or basic generation service provider's avoided cost of wholesale power. The board may authorize an electric power supplier or basic generation service provider to cease offering net metering whenever the total rated generating capacity owned and operated by net metering customer-generators statewide equals 0.1 percent of the State's peak electricity demand or the annual aggregate financial impact to electric power suppliers and basic generation service providers statewide, as determined by the board, exceeds \$2,000,000, whichever is less; and

(2) safety and power quality interconnection standards for wind and solar photovoltaic systems that shall be eligible for net metering. Such standards shall take into consideration the standards of other states and the Institute of Electrical and Electronic Engineers and shall allow customers to use a single, non-demand, non-time differentiated meter.

Such standards shall be effective as regulations immediately upon filing with the Office of Administrative Law and shall be effective for a period not to exceed 18 months, and may, thereafter, be amended, adopted or readopted by the board in accordance with the provisions of the "Administrative Procedure Act."
